**SUBJECT: CITY OF ROCHESTER BUREAU OF WATER
CATHODIC PROTECTION AND INTERCONNECTIONS, CONDUITS 2 AND 3, RUSH & MENDON
WENDEL PROJECT NO: 324905**

Dear Property Owner:

The City of Rochester Bureau of Water (City) is undertaking a project to rehabilitate two of its upland water supply conduits that convey water from the City's Hemlock Lake Water Filtration Plant to their Rush Reservoir. The purpose of the project is to implement improvements that will enhance the integrity of the conduits and ensure a safe and reliable supply of water. The conduits within the project area are located within permanent City easements across private properties and road rights-of-way.

On behalf of the City as their engineering consultant for the project, we are notifying you of planned construction activities that will take place on the conduits that are located within the permanent City easement across your property. The City's easement allows for access on your property to undertake this work. We ask for your cooperation and patience with the City's field crews in the performance of their work. The majority of the construction activities are anticipated to start as early as Wednesday, September 13, 2017 and end by November 2018. Pre-construction planning activities such as surveying layout and locating existing utilities will also take place prior to construction activities.

Construction activities will include installation of new valves and interconnecting piping between the two conduits to improve operational flexibility and system reliability. One of these interconnections will be located approximately 400-feet northwest of the intersection of Pinnacle Road and Lyons Road in the Town of Rush. The majority of new valves and interconnecting piping will be buried with the exception of two new air release valve vaults that will extend a couple of feet above grade. The new vaults will be similar in size and located in the same proximity of two existing vaults that also extend above grade. The work will also include re-establishment of a portion of an existing stone access driveway from the Lehigh Valley Trail to the new interconnection. All work will be completed within the City's existing 66-foot wide easement.

Please contact Richard Wing, City's Superintendent of Water Supply Maintenance at 585.314.6319 if you have any questions or would like to schedule a meeting to review the planned construction activities.

Alternatively, you can also contact me at 585.623.8939, extension 5804 if you have any questions or concerns about the specific field activities or the project in general.

Sincerely,

Wendel
